

# Using Data to Help Tell Your Library's Story

## *WLA Conference 2021*

*Presented by:*

*Melissa McLimans, Library Strategist and Consultant*

*Kim Cochran Kieseewetter, Data Analyst and Consultant*

# Session Road Map

# What's the (data) plan?

**When to use  
existing data  
sources and  
when to collect  
novel data?**

# Existing Data Sources

## Demographic Data

1. US Census Data
2. DataUSA
3. GetFacts Wisconsin

## Library Data

1. **Public Libraries**
  - a. National - IMLS' Public Libraries Survey
  - b. State - DPI's Public Library Service Data
2. **Academic and School Libraries**
  - a. National - NCES/IPEDS

## Community Data

1. **Education Data**
  - a. State - DPI Entity
  - b. National - NCES
2. **Workforce Data**
  - a. State - Department of Workforce Development
  - b. National - BLS
3. **Health & Human Services Data**
  - a. State - HHS Entity
  - b. National - HHS and CDC

# Data Collection Methods

# Novel Data Collection Methods

## Surveys

Excellent way to gather qualitative and quantitative data from a lot of people at the same time.

- Capture a lot of data; great for benchmarking; easy to share; can show clear directions
- Can't capture all voices; will need to use resources to market the survey; surveys aren't magic

## Questionnaires

Convenient method of capturing qualitative and often descriptive data from a targeted segment of your community.

- Relatively easy and affordable; rich, descriptive data; nice option between a survey and community conversation
- Might not receive thoughtful answers; need to spend time crafting questions and analyzing for themes

# Novel Data Collection Methods -- “Group Talk”™

## **Community Conversations**

Learn more about community needs and strengths and where you might fit into both through “kitchen table” conversations that build understanding and connection.

## **Focus groups**

This method of data collection comes from the market research world and can be used to understand responses to services, spaces, and more.

## **SWOT/SOAR/Internal Engagement**

Methods to capture unique and important perspectives about the library and community from your internal experts -- staff, board, Friends and more

- Rich qualitative and quantitative data; relationship building amongst participants and between the library and stakeholders; no special tools required
- Leading groups can be a little intimidating if you haven't had practice; logistics can be a challenge.

**Tying it all together...**

# What is data visualization?

**Why does data  
visualization  
matter?**

# Data Viz Basics

1. Audience persona
2. Identify data relationships
3. Chart type

# Data Viz Best Practices

Simple.

Clean.

Bold.

When creating a live presentation, minimize the use of text as much as possible on slides. If you feel the need to write out a lengthy explanation for your data visualizations, the data viz itself might be too complicated or over-wrought for the audience persona you've developed. Remember that if your slide(s) have lots of written content on them, the audience is much more likely to be reading your presentation instead of listening to you. Like you all are probably doing right now. Or maybe not. But probably. Because look at all this text! Don't you want to know what it says?!

Age of Attendees

Age of Attendees

Order data from **smallest to largest** or **largest to smallest**

**Unless** the x-axis or y-axis forces an order

# Resources for Creating Data Visualizations

## Free or Low-Cost Options:

- Microsoft Office products (Excel, PowerPoint, Word)
- Google Data Studio
- Canva

## Additional Options:

- Tableau
- Power BI
